

Criton 1TR Monitor Kit

Original Design by Al Wooley

Crossover Redesign by Matt Unger

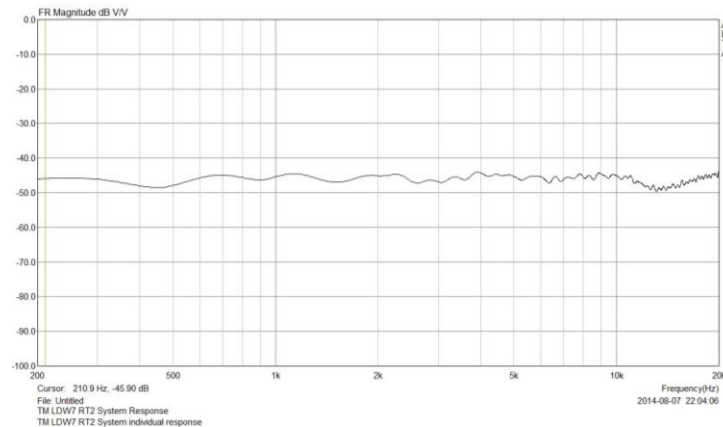

What's a Criton? The Greek derivative can mean “smart”, to think critically or carefully, to avoid any ambiguity.

This is our goal; to provide a simple, smart, clearly thought out series of kits for the DIY speaker builder community.

This is also one of the first designs where we are acknowledging the TEAM of people involved. As indicated the first design was done by Al Wooley and based on the input from other unofficial team members like Jim Livingstone, attendees at the 2014 Indiyana DIY event, and Mark and Chad from Meniscus, the crossover was redone by Dr Matt Unger who will continue as a kingpin in all TEAM designs. Thanks to Al and all the others.

All designs use the CSS RT2 true ribbon tweeter and the new LDW7 woofer and like the earlier V series, the first kits can be built into readily available off the shelf cabinets or the builder can build their own. The other 2 are ML-TL designs (where some additional TEAM members contributed) and require a custom taller cabinet which maintains the 8” width of the Criton 1TR and Criton 2TR.

Criton 1TR System Response
